linkedin.com/in/nawar-witti

Summary

Final-year Electrical & Electronics Engineering student focused on analog circuit design, PCB prototyping and embedded systems, leading a TÜBİTAK-funded biosignal device project. Partner in a medical devices trading company since 2017.

Languages

Turkish
Full Professional

Arabic
Native or Bilingual

English
Professional Working

Core Competencies

Technical
Analog & Power Electronics, PCB Design, ESP32/STM32, LTspice, Soldering.

Business
Technical Sales, B2B Development, Medical Devices, Tenders.

Experience

Electrical Engineering Intern, *ÖzBir Rail*
09/2026 – Present | Arifiye, Sakarya, Türkiye

- Follow the electrical installation of trains on the production line and support technicians with cable routing inside the cars.
- Inspect incoming electrical materials, prepare purchase-order lists and run inventory counts.

Partner & Business Development Manager, *Şam Şerif*
01/2017 – Present | Hatay, Türkiye

- Manage procurement and international trading of medical devices and hospital equipment with manufacturers and suppliers.
- Lead B2B sales to hospitals, clinics and distributors, from tender preparation and quotations to after-sales support.
- Progressed from Assistant Sales Manager (2017) to Sales Manager, Business Development Manager and partner.

Director of International Relations, *PSB ANATOLIA*
08/2025 – 10/2026 | Sakarya, Türkiye

- Coordinated foreign delegates and official invitations for the PSB Anatolia exhibition and prepared visitor statistics reports.

Electrical Engineering Intern, *GP Tech*
08/2024 – 09/2024 | Düzce, Türkiye

- Designed a DC-DC buck converter and built voltage/current measurement circuits with LM358 op-amps and a shunt resistor.
- Simulated op-amp circuits in LTspice/Proteus and reverse-engineered a commercial voltmeter/ammeter module.
- Designed a PCB in EasyEDA and fabricated it in-house (etching, drilling, soldering).

Education

Engineer's degree, Electrical and Electronics Engineering,
Sakarya University of Applied Sciences
Expected 2027

Academic & Professional Projects

Wireless EMG/EKG/EOG Acquisition Device,
TÜBİTAK 2209-A Research & Graduation Project | In Progress

- Single switchable analog front-end (CD4051 MUX, AD620 in-amp, 0.08–600 Hz filters, right-leg drive) for EMG, EKG and EOG, streaming over BLE via ESP32.
- Simulated gain of 100 and ~127–144 dB CMRR; first five build stages verified on hardware.
